

Winter Groundwater Level Percent Change from 2008 to 2019

Legend

- -176.67% to -28.90%
- -3.79% to 21.30%
- -28.89% to -3.80%
- 21.30% to 48.80%

— Streams

The data is an average of the ground water level for each well from 2008-2011 compared to the average ground water level from 2016-2019 and displayed as a percent change. Red and blue indicate wells outside of one standard deviation, while green and yellow fall within one standard deviation. The mean is an -3.8% change from the two timeframes. The defined winter months are January, February and March.
